| <p><b>10. Description of Proposed Construction:</b> Construct eight 19,874-kiloliter (kL) (125,000-barrel) multi-product fuel storage tanks, fuel distribution piping, pumphouse, fuel oil reclamation (FOR) facilities, and a lube oil storage and dispensing system. Work includes fuel tanker truck loading and unloading stations, fuel icing inhibitor injection system, and pier-side operations control building. Site preparations and improvements include extensive earthwork operations, earth retaining structures, pavements, storm and sanitary sewers, sedimentation basins, fencing, site lighting, electrical distribution systems, and emergency power generators. Relocate small security office and improve secondary entrance gate for truck traffic to accommodate new work. Demolish or close 30 aboveground or underground storage tanks, totaling greater than one million barrels of storage capacity, plus 24 other FOR and lube oil tanks of varying sizes. Project includes extensive remediation of fuel contaminated soil, automated fuel handling and tank gauging equipment, and physical security equipment funded by other appropriations.</p> |                                |  |  |  |                            |  |
| <p><b>11. REQUIREMENT:</b> 159,000 kiloliters (kL)      <b>ADEQUATE:</b> 0 kL      <b>SUBSTANDARD:</b> 159,000 kL</p> <p>PROJECT: Replace the existing fuel storage, distribution, and support facilities at a Defense Fuel Supply Point. This is an incrementally funded project. Authorization of \$140 million and Increment 1 funding of \$55.7 million was approved in the FY 2008</p>   |                                |  |  |  |                            |  |

| <p>program. Modification of Authorization of \$55 million for a total of \$195 million is requested in this program. The increase in authorization and funding is required to acquire the full scope of this project. Due to volatile market conditions at the time of award (Sep 2008), only six of the eight storage tanks and essential support facilities were affordable within the originally authorized amount. With congressional approval of this request, options for the remaining unawarded scope will be exercised in FY 2010. Third and fourth increments will be requested in FY 2011 and 2012, respectively. (C)</p> <p>REQUIREMENT: There is a need to replace underground and aboveground fuel storage tanks that are 60-80 years old at one of the largest and most important defense fuel terminals on the west coast. These tanks must be replaced before deterioration leads to further environmental contamination at this site adjacent to San Diego Bay. One million barrels of jet fuel (JP-5) and diesel fuel marine (DFM) storage must be provided to support ships and shore units of the Third Fleet, Naval Air Station North Island, Marine Corps Air Station Miramar, U.S. Coast Guard, and other regional forces, The proposed project will provide environmentally secure fuel storage meeting stringent federal and state environmental regulations. The high cost of this project is driven not only by the extensive scope of replacement work, but also by having to build over the existing terminal footprint, which is on a hilly, environmentally sensitive area, while terminal operators maintain undiminished fuel support to U.S. Forces.</p> <p>CURRENT SITUATION: The existing fuel storage facilities, some dating back to the 1920's, are aging and under increased scrutiny by Navy and state regulators because of their location on the ecologically sensitive Point Loma peninsula, adjacent to San Diego Bay. Environmental remediation of fuel-contaminated groundwater under the site is ongoing due to past fuel releases and leaks from these tanks. This highly publicized effort has raised state and local concerns about the environmental risk posed by these aging tanks and the need to replace them with safe, environmentally compliant fuel storage facilities.</p> <p>IMPACT IF NOT PROVIDED: If this project is not provided, further deterioration of these aging tanks will increase the risk of significant fuel leaks into this ecologically sensitive site. Voluntary or regulator-enforced closure of these tanks will diminish fuel storage capacity at this mission essential fuel terminal and have an immediate impact on supporting fuel requirements of U.S. Forces in the eastern Pacific.</p> <p>ADDITIONAL: Replacement of existing fuel facilities is the only feasible alternative. This project meets all applicable DoD criteria. The Defense Logistics Agency certifies that this facility has been considered for joint-use potential. Mission requirements, operational considerations, and location are incompatible with use by the other components.</p> |  |  |   |

10. **Description of Proposed Construction:** Construct a four-position aircraft direct fueling station (ADFS) with two 113,600 liter (30,000-gallon) jet fuel storage tanks. Extend fueling apron concrete ramp by 11,000 square meters (118,400 square feet). Work includes four fuel pumps with platforms, integrated controls and power distribution, filter/separators, relaxation chambers, control valves, fixed pantographs, and distribution piping. Install two oil/water separators and fuel containment dikes for environmental compliance. Provide necessary utilities, site preparation, and improvements to tie new ADFS to existing stations.

11. **REQUIREMENT:** 8 STATIONS      **ADEQUATE:** 4 STATIONS      **SUBSTANDARD:** 0 STATIONS

PROJECT: Provide an aircraft direct fueling system and associated supporting facilities. (C)

REQUIREMENT: There is a need to provide additional hot-pit (engine running) refueling capability at NAF El Centro to support its training mission. This base conducts training in both Field Carrier Landing Practice and Fleet Fighter Air Combat Maneuver Readiness Program, which require rapid refueling turnaround of aircraft squadrons to maximize training time. To accomplish this, aircraft must be refueled with engines running. This ADFS will increase the base's capability to accomplish this refueling in a safe and efficient manner.

CURRENT SITUATION: Aircraft refueling is provided by an existing ADFS, built in 1997, and by contracted refueling trucks. The ADFS can only refuel four aircraft at a time. Refueling aircraft by truck is inefficient and hazardous and requires aircraft to completely shut down. This process causes added flight-operations delays due to additional startup procedures and refueler truck breakdowns. Flight operations have increased by more than 45 percent since the first ADFS was built, exacerbating the need

| for faster, safer, and more efficient refueling systems.   |  |  |  |  |  |
| IMPACT IF NOT PROVIDED: If this project is not provided, the refueling of aircraft at NAF El Centro will continue to be hampered by slow, inefficient, and potentially hazardous procedures. Squadron training efficiency will be degraded. The environmental and safety hazards of refueling aircraft by truck with portable pantographs will remain unabated.  |  |  |  |  |  |
| ADDITIONAL: An analysis of the status quo versus adding to the existing hydrant system concluded that the proposed project was the more cost effective alternative to accomplish the mission. This project meets all applicable DoD criteria. The Defense Logistics Agency certifies that this facility has been considered for joint-use potential. Mission requirements, operational considerations, and location are incompatible with use by the other components. |  |  |  |  |  |

10. **Description of Proposed Construction:** Construct a new 5,800-meter (M) (19,029-foot) 12-inch transfer pipeline with pumps and filter/separators in shelter, isolation valves, cathodic protection, and controls. Provide two-position truck fillstand, pig launching and receiving stations, and generator with enclosure. Demolish in place existing 7,955-meter (26,100-foot) 8-inch pipeline, three pumphouses, and one other minor fuel structure. Work includes mechanical and electrical utilities and necessary site preparation and improvements.

11. **REQUIREMENT:** 5,800 M                      **ADEQUATE:** 0 M                      **SUBSTANDARD:** 7,955 M

**PROJECT:** Replace the existing deteriorated fuel transfer pipeline. (C)

**REQUIREMENT:** There is a need to replace an existing 8-inch underground transfer pipeline, built in the 1950's, that is too small to transfer the quantity of jet fuel needed to support four hydrant fuel systems. This fuel pipeline supports the base's mission as a major link in the air mobility strategic en route system for wide-bodied cargo and tanker aircraft.

**CURRENT SITUATION:** The existing 50-year-old transfer pipeline is deteriorating and too small to transfer the quantities of jet fuel needed for four hydrant fuel systems refueling C-5 cargo and KC-10 tanker aircraft. This undersized pipeline can flow fuel at less than one-half the rate needed to meet operational requirements. Leak-test failures indicate that without the pipeline's timely replacement, further deterioration and overstressing could cause pipeline failure. This hazard would cause costly environmental remediation and adverse mission impact.

IMPACT IF NOT PROVIDED: If this project is not provided, the ability of Travis AFB to sustain its fueling operations will be jeopardized. Failure of the existing fuel pipeline would significantly degrade the base's mission capability.

ADDITIONAL: Increasing the size of the fuel transfer pipeline is the only feasible alternative to deliver the fuel quantities needed at the flight line. This project meets all applicable DoD criteria. The Defense Logistics Agency certifies that this facility has been considered for joint use, as applicable, by other components. Mission requirements, operational considerations, and location are incompatible with use by the other components.

**12. Supplemental Data:**

**A. Estimated Design Data:**

1. Status

|  |       |
|--|-------|
| (a) Date Design Started:                                     | 01/08 |
| (b) Parametric Cost Estimate Used to Develop Costs (Yes/No): | Yes   |
| (c) Percent Completed as of January 2009:                    | 35    |

10. **Description of Proposed Construction:** Construct a new jet fuel storage complex (JFSC) consisting of two 397-kiloliter(kL) (2,500-barrel) (BL) aboveground jet fuel storage tanks with standard appurtenances, truck loading and unloading stations, pumphouse, operations building, and refueler parking area. Provide utilities, pavements, access roads, area lighting, emergency generator, security fencing, fire protection, and communications. Demolish five underground horizontal tanks, pumphouse, and truck load/unload facilities at the existing JFSC.

11. **REQUIREMENT:** 5,000 BL                      ADEQUATE: 0 BL                      SUBSTANDARD: 4,762 BL

PROJECT: Replace jet fuel storage complex. This is a Class I (fix non-compliance) environmental project. (C)

REQUIREMENT: There is a need to replace five existing underground jet fuel storage tanks, ranging in capacity from 30,000 gallons to 50,000 gallons, to comply with the State of Florida Administrative Code. This law requires secondary containment for underground fuel storage tanks after December 31, 2009. The Agency proposes to comply with this requirement by constructing two aboveground vertical storage tanks of comparable overall capacity and closing the underground tanks. Fuel facilities affected by the demolition of these tanks will be replaced. The assigned fighter wing supports two combatant commands and the NASA space shuttle mission. A reliable, environmentally compliant fuel storage complex is essential for sustaining support of these missions.

CURRENT SITUATION: At this installation jet fuel is stored in five underground single-walled steel tanks that vary in age from 19 to 40 years old. After December 31, 2009, these tanks will be out of compliance with Florida law and subject to fines or closure.

| <p>IMPACT IF NOT PROVIDED: If this project is not provided, the ability to store fuel at this installation will be jeopardized after the Florida deadline. Without fuel storage on base, the wing's flying missions will be severely impacted to the point of failure.</p> <p>ADDITIONAL: Construction of new aboveground fuel storage tanks is the only feasible alternative to comply with Florida law. This project meets all applicable DoD criteria. The Defense Logistics Agency certifies that this facility has been considered for joint use, as applicable, by other components. Mission requirements, operational considerations, and location are incompatible with use by the other components.</p>  |  |  |                                   |                          |               |  |                |   |      |                                |       |                           |       |                              |       |                                    |    |   |     |  |     |                            |     |           |     |              |     |              |     |

| 10. Description of Proposed Construction: Construct a new jet fuel storage complex (JFSC) consisting of two 397-kiloliter(kL) (2,500-barrel) (BL) aboveground jet fuel storage tanks with standard appurtenances, truck loading and unloading stations, pumphouse, operations building, refueler parking area, and heated refueler truck shelter with equipment storage. Provide utilities, pavements, access roads, area lighting, emergency generator, security fencing, fire protection, and communications. Demolish two 1,590-kL (10,000-BL) aboveground tanks and supporting fuel structures at the existing JFSC. |  |  |                               |  |                     |          |           |              |
| 11. REQUIREMENT: 5,000 BL                      ADEQUATE: 0 BL                      SUBSTANDARD: 20,000 BL  |  |  |                               |  |                     |          |           |              |
| PROJECT: Replace Jet Fuel Storage Complex. (C)   |  |  |                               |  |                     |          |           |              |
| REQUIREMENT: There is a need to relocate a jet fuel storage complex before the lease for the current fuel storage area expires in Fiscal Year (FY) 2013. The land is owned by the Duluth Airport Authority, which plans to expand the commercial airport at this site when the Air National Guard vacates.   |  |  |                               |  |                     |          |           |              |
| CURRENT SITUATION: The ANG must vacate the current JFSC, which contains two 10,000-BL tanks. This capacity exceeds requirements (5,000 BL total). The existing complex does not comply with federal, state, and local environmental regulations for spill containment and leak detection. Fillstands, refueler parking areas, and unload stations have deteriorated pavements that do not provide adequate spill containment and pose a foreign object damage (FOD) hazard for aircraft on the parking apron. Mechanical and electrical systems are antiquated and a safety hazard.                                      |  |  |                               |  |                     |          |           |              |

| 5. Program Element<br><b>0702976S</b>   | 6. Category Code<br><b>124</b>                    | 7. Project Number<br><b>DESC1002</b>                        | 8. Project Cost (\$000)<br><b>15,000</b> |         |               |             |                |                        |      |      |    |
| <p>IMPACT IF NOT PROVIDED: If this project is not provided, the storage complex could be closed, forcing DLA to truck fuel to the ANG base from off-site locations to support the fueling requirements of the assigned ANG fighter wing, which has a homeland security mission. Mission degradation or failure could result. In addition, safety and fueling operational constraints would impact mission accomplishment.</p> <p>ADDITIONAL: An analysis considered several alternatives for providing fuel for the ANG mission at Duluth IAP. Construction of a new JFSC was the most cost effective solution. This project meets all applicable DoD criteria. The Defense Logistics Agency certifies that this facility has been considered for joint use, as applicable, by other components. Mission requirements, operational considerations, and location are incompatible with use by the other components.</p>  |   |   |  |         |               |             |                |                        |      |      |    |

| 10. Description of Proposed Construction: Construct a four-position jet fuel loading/unloading facility consisting of two combination load/unload stations and two single unload stations. Demolish existing six-station unload facility. Modify existing containment pavements to provide rollover curbing. Upgrade electrical system to support new pumps and controls.  |  |  |                               |   |                     |          |           |              |
| 11. REQUIREMENT: 4 Stations                      ADEQUATE: 0 Stations                      SUBSTANDARD: 6 Stations   |  |  |                               |   |                     |          |           |              |
| PROJECT: Replace obsolete six-station unload facility with modern four-station facility. (C)   |  |  |                               |   |                     |          |           |              |
| REQUIREMENT: There is a need to unload more quickly commercial fuel trucks delivering jet fuel to bulk fuel tanks than the current single-hose unload station can provide. The new unload stations will comply with current standard design criteria to allow simultaneous unloading of multiple-compartment tankers using higher flow-rate pumps and modern safety controls. Two refueler truck loading positions are needed to provide an alternate means of delivering fuel to aircraft on the flight line when the existing transfer pipeline from bulk tanks to operating tanks is out of service for maintenance or repairs. |  |  |                               |   |                     |          |           |              |
| CURRENT SITUATION: The existing six stations unload fuel from 4-5 compartment commercial trucks with single fuel hoses at one-half the flow rate required by DoD criteria. This process is too slow to accommodate multiple fuel truck deliveries per day into receiving bulk-fuel storage tanks. There are no means of providing fuel to the South Ramp hydrant system when its transfer pipeline, pumps, or control system are out of service. This facility is more than 40 years old and in poor condition with obsolete parts that are difficult to replace.  |  |  |                               |   |                     |          |           |              |

|  |                                |  |  |                            |  |

| 5. Program Element<br><b>0702976S</b>  | 6. Category Code<br><b>126</b> | 7. Project Number<br><b>DESC10S1</b>       | 8. Project Cost (\$000)<br><b>2,700</b>            |                            |  |
| <p>IMPACT IF NOT PROVIDED: If this project is not provided, the base will be unable to access fuel in two bulk fuel tanks when an aging transfer pipeline is out of service. Unloading of commercial tank trucks will continue to be a lengthy, inefficient operation. Both of these conditions will hamper the wing's flying mission by delaying air operations.</p> <p>ADDITIONAL: New construction is the only feasible alternative to provide refueling capability from these storage tanks or improve fuel delivery rates. This project meets all applicable DoD criteria. The Defense Logistics Agency certifies that this facility has been considered for joint use, as applicable, by other components. Mission requirements, operational considerations, and location are incompatible with use by the other components.</p>   |                                |  |  |                            |  |

| TOTAL REQUEST (ROUNDED) .....   |                         | -  | -  | -         | 3,000               |  |
| 10. Description of Proposed Construction: Upgrade the capacity of an existing jet fuel pumphouse by replacing four 300-gallon-per minute (GPM) pumps and filter/separators with 600 GPM pumps and filter/separators. Add to existing metal pump shed to accommodate new equipment and piping. Provide two-position truck fillstand and new piping from pumphouse. Upgrade mechanical and electrical systems in pumphouse to meet code requirements. |                         |  |  |           |                     |  |
| 11. REQUIREMENT: 2,400 GPM                      ADEQUATE: 0 GPM                      SUBSTANDARD: 1,200 GPM   |                         |  |  |           |                     |  |
| PROJECT: Upgrade pumphouse and truck fillstand at Robert Gray Army Airfield. (C)  |                         |  |  |           |                     |  |
| REQUIREMENT: There is a need to provide adequate jet fuel flow rates at refueler truck fillstands and a five-outlet hydrant fuel system to support aircraft refueling evolutions during deployments. Robert Gray Army Airfield is an Army Power Projection Platform for the deployment of units from Fort Hood. The proposed project upgrades pumps, filter/separators, mechanical controls, and electrical systems to meet current DoD criteria.   |                         |  |  |           |                     |  |
| CURRENT SITUATION: The existing pumps and filter/separators are undersized and cannot deliver fuel flow rates to meet requirements for refueling aircraft. The truck fillstand was shut down due to safety hazards. A temporary expedient fillstand is being operated to fill refueler trucks until this project is completed.  |                         |  |  |           |                     |  |

|   |                                |  |   |                            |  |

| <p>IMPACT IF NOT PROVIDED: If this project is not provided, aircraft refueling will continue to be hampered by inadequate flow rates, slowing aircraft turn times needed to meet deployment schedules. Continued use of a temporary fillstand jeopardizes the safety of personnel and risks environmental contamination.</p> <p>ADDITIONAL: Upgrading the capacity of pumphouse equipment is the only feasible alternative to meet DoD fueling criteria. This project meets all applicable DoD criteria. The Defense Logistics Agency certifies that this facility has been considered for joint use, as applicable, by other components. Mission requirements, operational considerations, and location are incompatible with use by the other components.</p> |                                |  |   |                            |  |

| <b>10. Description of Proposed Construction:</b>   |  |  |                               |  |                     |          |           |              |
| Construct a 10-inch diameter carbon-steel pipeline to transfer jet fuel from bulk storage tanks to operating storage tanks supporting two hydrant fuel systems on the flightline. Work includes installation of isolation valves and pits, pig launching and receiving stations, and cathodic protection systems. Construct three commercial tanker truck fuel unload stations with spill containment pavements. Upgrade electrical systems and provide site and pavement restoration along the pipeline alignment. Clean, close, and abandon existing 8-inch pipeline per regulatory criteria.  |  |  |                               |  |                     |          |           |              |
| <b>11. REQUIREMENT:</b> 2,600 Meters (M)                      ADEQUATE: 0 M                      SUBSTANDARD: 2,650 M  |  |  |                               |  |                     |          |           |              |
| PROJECT: Replace a deteriorated 8-inch jet fuel pipeline with a 10-inch line. (C)  |  |  |                               |  |                     |          |           |              |
| REQUIREMENT: There is a need to replace a 50-year-old, deteriorating, undersized jet-fuel pipeline that cannot adequately sustain required fuel flow rates during peak operating periods and contingency operations in support of combatant commands. A larger diameter pipeline will provide the capability to achieve these rates to supply two hydrant fuel systems with a total of 39 hydrant outlets. When this pipeline is replaced, a key node in the air bridge across the Pacific will have a modern, reliable fuel distribution system. A new transfer line will eliminate the risk of environmental damage by failed worn out system components. A new three-position truck unload facility will replace a 1950's-vintage system of 10 truck stations that are difficult to operate and maintain. |  |  |                               |  |                     |          |           |              |

|   |                                |  |   |                            |  |

| <p>CURRENT SITUATION: An existing 8-inch fuel pipeline is too small and deteriorated to support Fairchild AFB's fueling mission. This pipeline has a history of leaks, and limitations due to its configuration and location prevent adequate pipeline inspection and maintenance. The existing truck unload facility lacks adequate pumping capability and compliant spill containment structures.</p> <p>IMPACT IF NOT PROVIDED: If this project is not provided, the existing pipeline has a high probability of failure due to its age and condition. A shutdown of the pipeline would jeopardize the capability to refuel aircraft in support of contingency operations since resupply of operating tanks directly from tanker trucks is limited. Pipeline failure would create an environmental emergency that would be costly and time consuming to remediate.</p> <p>ADDITIONAL: New construction to replace the existing pipeline is the only feasible alternative to accomplish the refueling mission. This project meets all applicable DoD criteria. The Defense Logistics Agency certifies that this facility has been considered for joint use, as applicable, by other components. Mission requirements, operational considerations, and location are incompatible with use by the other components.</p> |                                |  |   |                            |  |

| 10. Description of Proposed Construction: Provide a lump sum amount for unspecified minor construction projects not otherwise authorized by law for the construction, alteration, or conversion of permanent facilities.   |  |  |                                      |                     |
| 11. REQUIREMENT: No specific unit of measure   |  |  |                                      |                     |
| PROJECT: Unspecified Minor Construction projects as required. (C)  |  |  |                                      |                     |
| REQUIREMENT: Minor construction projects authorized by 10 U.S. Code 2805 are military constructions projects with an estimated funded cost between \$750,000 and \$2,000,000; however, projects with an estimated funded cost of \$1,500,000 to \$3,000,000 may be funded under this authority when specifically planned to correct a life, health, or safety deficiency. This proposal provides a means of accomplishing urgent projects that are not identified but which arise during Fiscal Year (FY) 2010. Included would be projects to support new mission requirements and essential support to Defense Logistics Agency functions that could not wait until the availability of funds from the FY 2011 Military Construction Program. |  |  |                                      |                     |

12. Supplemental Data:

A. Estimated Design Data:

1. Status

- (a) Date Design Started: Varies
- (b) Parametric Cost Estimate Used to Develop Costs (Yes/No):
- (c) Percent Completed as of January 2009:
- (d) Date 35 Percent Completed:
- (e) Date Design Complete:
- (f) Type of Design Contract:

2. Basis

- (a) Standard or Definitive Design: No
- (b) Date Design was Most Recently Used: N/A

3. Total Cost © = (a)+(b) or (d)+(e) (\$000)

- (a) Production of Plans and Specifications
- (b) All Other Design Costs
- (c) Total
- (d) Contract
- (e) In-House

4. Contract Award

5. Construction Start

6. Construction Completion

B. Equipment associated with this project that will be provided from other appropriations:

None

| <p>IMPACT IF NOT PROVIDED: If this project is not provided, NAVSTA GTMO will operate with dwindling fuel storage capacities as tanks become unserviceable. Lack of fuel storage capacity will jeopardize support to fleet activities and other missions.</p> <p>ADDITIONAL: Construction of a new fuel storage tank is the only feasible alternative to meet fuel stockage levels. This project meets all applicable DoD criteria. The Defense Logistics Agency certifies that this facility has been considered for joint use, as applicable, by other components. Mission requirements, operational considerations, and location are incompatible with use by the other components.</p> |                                |  |  |                            |                |

**10. Description of Proposed Construction:** Provide two 1,908-kiloliter (kL)(12,000-barrel) (BL) below grade, steel-lined storage tanks for jet fuel with all associated pumps, piping, instrumentation, and a pump control and filter building. Additionally, provide six kilometers (km) (3.7 miles) of 150-millimeter (6-inch) diameter carbon-steel fuel transfer pipeline from Marathi NATO fuel depot to the existing fuel complex at NSA Souda Bay. Work includes improvements to the existing transfer pump station, fuel truck unloading station, upgrades to the electrical system, new controls, cathodic protection, new communications duct bank, leak detection piping, paving, generator, fencing, and lighting. Provide operations and maintenance support information. Demolish or decommission the existing deteriorated pipeline, operating-tank pumphouse, three 50,000-gallon underground fuel storage tanks, and one closed tank. Provide mitigation of construction impact on archaeological site along pipeline alignment.

| 11. REQUIREMENT: 32,200 BL ADEQUATE: 8,200 BL SUBSTANDARD: 3,571 BL  |  |  |  |   |  |
| PROJECT: Construct two bulk fuel storage tanks and replace an inter-terminal fuel pipeline. (C)  |  |  |  |   |  |
| REQUIREMENT: There is a need to provide additional fuel storage capacity to support NSA Souda Bay's operational and contingency requirements and to replace aging underground tanks. In addition, an existing, deteriorating four-inch pipeline, supplying fuel to the activity, must be replaced.   |  |  |  |   |  |
| CURRENT SITUATION: NSA Souda Bay is a primary logistics hub in the eastern Mediterranean for essential U.S. and NATO missions. Three of seven underground storage tanks (UST) are single walled, which fail to meet Greek final governing standards (FGS) for USTs. The existing 3.9-km (2.4-mile) pipeline, built in 1971, continues to corrode, shedding rust particles into the fuel pipeline and posing an environmental risk of rupturing. Civilian encroachment of the pipeline easement makes maintenance and repair of the pipeline difficult and creates the potential for catastrophic environmental contamination if civilians damage the pipeline by their activities. Moreover, the pipeline is too small to support the fuel transfer rates from the fuel depot to the NSA storage tanks to meet operational requirements.   |  |  |  |   |  |
| IMPACT IF NOT PROVIDED: If this project is not provided, NSA Souda Bay will continue to have inadequate bulk fuel storage capacity to meet its mission requirements for assigned and transient aircraft. Three non-compliant USTs and a deteriorating transfer pipeline will continue to put the activity at risk of environmental contamination and costly remediation.   |  |  |  |   |  |
| ADDITIONAL: New construction is the only feasible alternative to provide adequate fuel storage capacity and an environmentally and operationally sufficient transfer pipeline. This project is not part of a NATO capability package and consequently, not eligible for NATO Security Investment Program (NSIP) funding. For the pipeline work, a precautionary prefinancing statement has been submitted to NATO for the future recoupment of funds should this project become eligible for NSIP funding in the future. A similar statement will be submitted for the storage tank work. The pipeline replacement portion of this project was originally approved as a separate project in the FY 2006 DLA MILCON program. DLA canceled this project without prejudice in 2007 to use it as a source of funds for a reprogramming request for an essential fuel project at Marine Corps Air Station Miramar, CA (FY 2006 project). In FY 2009, Congress appropriated \$8 million without explanation of the approved scope of work for these funds. For clarity, this FY 2010 request seeks authorization of the full scope of this project and proposes to use the FY 2009 funds (\$8 million) in conjunction with the FY 2010 requested appropriations for this work. This project meets all the applicable DoD criteria. The Defense Logistics Agency certifies that this facility has been considered for joint-use potential. Mission requirements, operational considerations, and locations are incompatible with use by other components. |  |  |  |   |  |

| 10. Description of Proposed Construction: Replace an existing JP-8 in-shelter fuel hydrant system to include: two 70,000-barrel (BL) cut-and-cover operating tanks; four 600 gallon-per-minute (GPM) issue pumps per tank; two 1,200 GPM horizontal filter separators for receipt filtration; 10-inch diameter stainless steel hydrant loop piping; filter separator, operations, and control building; facility for generator; and fillstand canopy. Project includes pavement repairs, cathodic protection, security lighting, automatic tank gauging, leak detection system, storm drains, product recovery system, and automated pressure and flow control systems. Demolish two existing 70,000-BL cut-and-cover tanks and underground piping. Reuse 10 fixed pantographs in hardened aircraft shelters. Provide Operations and Maintenance Support Information (OMSI). |  |  |                               |   |                     |          |           |              |
| 11. REQUIREMENT: 10 Outlets (OL)      ADEQUATE: 0 OL      SUBSTANDARD: 10 OL   |  |  |                               |   |                     |          |           |              |
| PROJECT: Replace hydrant fuel system in hardened aircraft shelters. (C)  |  |  |                               |   |                     |          |           |              |
| REQUIREMENT: There is a need to replace a deteriorated, inadequate hydrant fuel system, which provides hot refueling capability to 10 existing hardened aircraft shelters for tactical fighter aircraft during combat operations. This system is essential for physically protecting mission-critical aircraft and personnel during fueling operations at this in-place war fighting base.   |  |  |                               |   |                     |          |           |              |
| CURRENT SITUATION: The existing hydrant system, built in 1981, is inadequate to provide fuel support at the flow rates and quantities needed. Components are in an advanced stage of deterioration with faulty electrical systems, failing pumps and controls, and   |  |  |                               |   |                     |          |           |              |

|   |   |                                      |  |                            |

| <p>corroded pipelines, which have leaked already due to corrosive pipe bedding conditions. The system lacks basic pressure controls, subjecting the pipeline to excessive pressure surges that cause frequent fuel leaks at valves and flanges. Because the automated hydrant controls are not functional, the system is operated in a manual mode, which accelerates wear and premature breakdown of pump bearings and seals. A hydrant system evaluation team concluded that over 90 percent of the hydrant system needed repairs; they recommended replacement of the entire system.</p> <p><b>IMPACT IF NOT PROVIDED:</b> If this project is not provided, the base will be compelled to provide ineffective, expedient repairs to this hydrant system to prevent serious degradation in hot refueling capability to support mission requirements. A potential environmental hazard will continue to be operated, jeopardizing aircraft and personnel. Hot refueling of tactical aircraft at this vital base is a war fighting capability that must be sustained. A new fully capable system is essential.</p> <p><b>ADDITIONAL:</b> Construction of a new hydrant fuel system is the only feasible alternative to meet mission requirements. With the termination of the Combined Defense Improvements Program (CDIP) on November 19, 2008, host nation funding is no longer available. This project meets all applicable DoD criteria. The Defense Logistics Agency certifies that this facility has been considered for joint use, as applicable, by other components. Mission requirements, operational considerations, and location are incompatible with use by the other components.</p> |   |                                      |  |                            |

| <b>10. Description of Proposed Construction:</b> Construct 2,150 meters (M) (7,050 feet) of 150-millimeter (6-inch) carbon steel pipe with cathodic protection and leak detection. Work includes installing two filter separators and extending the existing filter shed and access road.   |   |                                      |   |                            |
| <b>11. REQUIREMENT:</b> 2,150 M                      ADEQUATE: 0 M                      SUBSTANDARD: 0 M  |   |                                      |   |                            |
| PROJECT: Construct a pipeline to connect a fuel storage tank to the base's fuel distribution pipeline. (C)  |   |                                      |   |                            |
| REQUIREMENT: There is a need to connect a 3,180-kiloliter (20,000-barrel) jet fuel storage tank to the base's fuel distribution pipeline system to support operational requirements for refueling aircraft and improve mission readiness. The central location of this storage tank to aircraft parking aprons improves the turnaround time for refueler trucks to complete refueling evolutions to aircraft. |   |                                      |   |                            |
| CURRENT SITUATION: This stand-alone storage tank was built in 1986 to store a special jet fuel required by an aircraft now retired from service. It is currently used to store and distribute conventional jet fuel (JP-8) but can only be refilled by tanker trucks. This condition severely limits the tank's usefulness since a significant effort is needed to refill the tank by truck.                  |   |                                      |   |                            |

|  |                                |  |   |                            |  |

| <p>IMPACT IF NOT PROVIDED: If this project is not provided, aircraft refueling operations will continue to be impaired by inefficient resupply of fuel to this storage tank.</p> <p>ADDITIONAL: New construction is the only feasible alternative to provide an efficient aircraft fueling and storage facility. . This project is not part of a NATO capability package and is consequently not eligible for NATO Security Investment Program funding at this time. A precautionary prefinancing statement will be filed so, if the project does become eligible in the future, the U.S. may recoup funds from NATO. This project meets all applicable DoD criteria. The Defense Logisitcs Agency certifies that this facility has been considered for joint use, as applicable, by other components. Mission requirements, operational considerations, and location are incompatible with use by the other components.</p> |                                |  |   |                            |  |
