This reprogramming action is submitted for prior approval because it initiates a new start. This reprogramming action realigns \$11.7 million within the Research, Development, Test, and Evaluation, Air Force, 07/08, appropriation, for the Senior Leader Command, Control, and Communications effort. This action reprograms funds in support of higher priority items, based on unforeseen military requirements, than those for which funds were originally appropriated. It meets all administrative and legal requirements, and none of the items has been denied previously by the Congress.

Explanation: This new start effort will build and demonstrate a system capable of providing reliable, secure voice/data/video capability on all Very Important Person Special Airlift Mission (VIPSAM) aircraft. The funds will be used to conduct acquisition strategy development, concept development, technology assessment, contracting activities, System Program Office (SPO) support, and development/test of three Senior Leadership Command, Control and Communications System -A (SLC3S-A) mini package test articles. The objective is to standardize capability across all aircraft types currently in use by VIPSAM missions. A successful SLC3S-A mini package demonstration in FY 2008 will provide a cost-effective solution for a potential FY 2009 – FY 2010 initiative to upgrade secure communications on the VIPSAM fleet.
