A. Mission Description and Budget Item Justification

The Defense Technical Information Center’s (DTIC) unique mission is to aggregate and fuse science and technology data to provide rapid, accurate, and reliable knowledge to researchers and developers of the next generation of technologies needed to assure our national security. DTIC, a DoD Field Activity under the authority, direction and control of the Under Secretary of Defense for Research and Engineering (USD(R&E)), is the DoD’s singular executive agent and designated source for DoD-funded scientific, technical, engineering, and industry-related information. DTIC provides USD(R&E) the capability to develop and deliver new information products and tools to share knowledge and enhance decision making.

This Program Element (PE) provides for DTIC mission operations, which are focused on three core efforts: Collection, Dissemination, and Information Analysis Centers (IACs):

- 1) Collect, curate, and preserve science and technical information resulting from DoD’s \$14B annual investment. Build upon past work to avoid costly and time-delaying rework.
- 2) Share and disseminate information as required by statute; provide access to more than 4.4 Million technical records. Provide DoD users improved situational awareness. Simplify and reduce expertise needed to discover the most relevant of information - provide role based content, research results, budget investment, where work is being done, by who, and what level of maturity.
- 3) Operate the DoD Information Analysis Centers (IACs), centered on Defense Systems; Cyber Security and Information Systems; and Homeland Defense and Security. The IACs provide the Department with an R&D contracting vehicle to support PEO and PM insertion of technical innovation into systems of record.

Other priority DTIC mission activities are described below:

- 1) Foster collaboration across communities, researchers, warfighters, industry, academia, Federal agencies, and Allies. Increase collaboration between S&T/RDT&E and warfighters.
- 2) Ensure information protection, document marking, authenticate and validate users, enforce access controls.
- 3) Develop and manage DoD’s Science Technology Information Policy (STIP).
- 4) Agile software development, secure (cyber), and host applications supporting R&E initiatives and activities.
- 5) Maintain compliance with existing public law, regulations, and guidelines.
- 6) Implement congressionally-mandated programs, as directed within the FY 2019 National Defense Authorization Act (NDAA):

UNCLASSIFIED

--	--

- Innovators Information Repository (IIR): increase awareness of Small Business Innovation Research (SBIR)/ Small Business Technology Transfer (STTR) and other small business innovative technology capability and improve transition to systems of record. DTIC is creating a database with reports, proposals, and vendor information.
- Global Research Watch (GRW) Program: provide decision quality analysis of open source information. The Strategic Intelligence & Analysis Cell (SIAC) program is evaluating potential algorithms that will analyze journal literature and other open source information from both allies and competitors. DTIC will manage and host in the cloud a tool based on promising algorithms.
- Datasets and Data Repositories: establish database of datasets created during research activities to support reuse; encourage data management planning with each research project. DTIC is creating a dataset directory to direct users to organizations holding relevant datasets.

In support of these mission operations, DTIC purchases space and critical shared services (e.g., human resources (HR); financial management; contracting; common-use IT services and security; communications; and civilian payroll services) from expert and efficient DoD service-providers.

DTIC MISSION RESULTS

The Department invests over \$90 Billion annually in Research, Development, Test and Evaluation (RDT&E) needed to protect and defend our nation. DTIC preserves the fruits of these costly labors for reuse across the enterprise. As an efficient and cost-effective steward of technical information, DTIC collects data and provides answers to researchers seeking state-of-the-art data relevant to their projects. Through this interchange of information, DTIC accelerates innovation and prevents duplication of experiments, tests, and prototyping activities because researchers can build on what has been done or choose other paths if prior research resulted in a dead end. Using DTIC-created forums, researchers, Warfighters, and industry partners can also rapidly collaborate and connect across the DoD research and engineering (R&E) enterprise. Finally, DTIC provides a department-level map of R&D activity. This map gives decision-makers insight into current and past research, highlighting where progress is being made and by whom. Through the preservation and sharing of the results of billions of dollars of past DoD investments, DTIC increases the return on past investments and accelerates current efforts, saving the Department precious time and dollars. Through its collaboration tools and outreach to the R&E community, DTIC connects researchers across the lab enterprise, to include researchers and engineers, Warfighters and DoD's industry partners.

DTIC's Information Analysis Centers (IACs) drive innovation and technological development by anticipating and responding to the information needs of the defense and broader community. The IAC Program Management Office (IAC PMO) provides core funding, management and oversight of three IACs, which are chartered by DoD to collect, research, analyze, and disseminate scientific and technical information in specialized fields to DoD researchers and acquisition professionals. In addition, the IAC PMO manages several multiple award contracts to make possible new research that builds on prior investments and incorporates the innovations of government, industry, and academia. For the last several years, competition inherent in the IAC model has produced savings of 10-16% under projected costs, while still delivering vetted technical expertise to address DoD's complex challenges. Providing DoD labs and program managers access to thousands of industry subject matter experts, the IACs performed \$2 Billion of customer-funded research and analysis in FY 2019. The results of the work are a rich source of new material in DTIC's technical repositories and are available to users across the Department. The IAC approach was identified as a "best practice" by the Director of Defense Pricing and Contracting and the then-Acting Assistant Secretary of Defense for Research and Engineering in a July 2018 memo wherein they recommended use of the IAC contracts across DoD as "vehicles of first choice."

NATIONAL DEFENSE STRATEGY

The DTIC and IAC mission operations described above are focused on actively supporting USD(R&E) efforts in generating decisive and sustained U.S. military advantages through the pursuit of three distinct lines of effort, as outlined in the 2018 National Defense Strategy (NDS):

- 1) Rebuild military readiness as we build a more lethal Joint Force: Develop and implement machine learning and semantic language algorithms to simplify discovery of relevant information – reduce search time and user expertise, provide tailored and actionable results, provide ability for S&T communities to collaborate with stakeholders and partners.
- 2) Strengthen alliances as we attract new partners: Modernize user validation technology, implement White House directed Controlled Unclassified Information (CUI) markings while continuing to support legacy distribution code marking, support White House Open Science mandate and provide information to allies while preventing release of sensitive documents and data.
- 3) Reform the Department’s business practices for greater performance and affordability: Increase ability and reduce time and cost to respond to current and future R&E support needs. Migrate application hosting to the cloud; develop modular components; leverage Open Source, commercial, and Small Business Innovative Research (SBIR) technology; leverage the Information Analysis Center contracting model.

B. Program Change Summary (\$ in Millions)	FY 2019	FY 2020	FY 2021 Base	FY 2021 OCO	FY 2021 Total
Previous President's Budget	56.853	57.716	59.778	-	59.778
Current President's Budget	56.853	57.716	59.369	-	59.369
Total Adjustments	0.000	0.000	-0.409	-	-0.409
• Congressional General Reductions	0.000	-			
• Congressional Directed Reductions	0.000	-			
• Congressional Rescissions	-	-			
• Congressional Adds	-	-			
• Congressional Directed Transfers	-	-			
• Reprogrammings	-	-			
• SBIR/STTR Transfer	-	-			
• Program Changes	-	-	-0.409	-	-0.409

Change Summary Explanation

Program Change: The FY 2021 Base program reduction (-\$0.409 Million), as compared to the Previous President’s Budget FY 2021 Base, reflects a net change resulting from the following adjustments:

- 1) A Defense-wide Review (DWR) program adjustment (decrease) of \$0.100 Million to reduce cost and manage risk of DTIC Public Internet materials.
- 2) A Defense-wide Review (DWR) program adjustment (decrease) of \$0.446 Million as part of the Fourth Estate Network Optimization (4ENO) effort. Funds are realigned to the Defense Information Systems Agency (DISA).
- 3) Miscellaneous adjustments related to economic assumptions, inflation, and civilian payroll pricing.

A. Mission Description and Budget Item Justification

DTIC is responsible for developing, coordinating and enabling a strong scientific and technical information (STINFO) program for the Office of the Under Secretary of Defense for Research and Engineering (OUSD(R&E)) and the DoD scientific and technical (S&T) enterprise. In this role, DTIC sets policy for scientific and technical information (STI) exchanges for the research and engineering (R&E) community. DTIC's goal is to maximize the availability and use of technical information and products resulting from Defense-funded technical activities while ensuring restrictions to safeguard national security, export control, and intellectual property rights. The Department conducts science and technology research via the following means: 60+ labs, Federally Funded Research and Development Centers (FFRDCs), DTIC's Information Analysis Centers (IACs), and other contracts and grants. DTIC's information assets, tools and community interaction capabilities foster innovation, competition and identification of solutions in an access-controlled environment.

Within this budget project, DTIC's organizational efforts are focused on the Collection and Dissemination core mission areas, along with the following critical activities:

- 1) Search: Develop new algorithms and tailored search mechanisms that enable our users to quickly discover useful information and to ensure we present the most relevant information. Semantic (machine learning) mapping of information for comprehensive and precise data retrieval--built on DTIC's custom thesaurus (for use by DoD and Allied partners). Expand and enhance our data collections to improve the quality and completeness of the data.
- 2) Collaboration: Provide customized collaboration platforms and tools for the DoD science and technology community to work together on investments that efficiently deliver solutions to the Warfighter.
- 3) Access Identity: Strengthen methods of user authentication through the use of public key infrastructure (PKI) tokens, biometrics and other methods to grant access to recognized, trusted and authorized users. Protect intellectual property (IP) and industry proprietary data assets entrusted to DTIC's stewardship (protect information access).
- 4) Data Fusion/Analysis: Gather information from multiple data sources and provide knowledge products that fuse the disparate data sets into a single view of the life cycle of research. Present an overarching picture of research investment that enables decision-makers to link multiple efforts with integrated capabilities (employ resources to highest priority efforts and coordinate efforts across Services).
- 5) Cyber Security: Continue to leverage state-of-the art technologies, processes and practices designed to protect DTIC networks, computers, programs and data from attack, damage or unauthorized access.
- 6) Data Center Optimization/Cloud: Migrate services to cloud providers to improve availability, survivability, and mission flexibility; to reduce time to deliver new capabilities; to save costs; and to enhance cyber security.
- 7) Mobile and Emerging Technology: Ensure DTIC products, tools and interfaces are compatible with, and actively support customer/user (DOD, industry partners, academic researchers) devices, operating systems, and browsers.
- 8) Controlled Unclassified Information (CUI): An ongoing effort to standardize the way the Executive Branch handles unclassified information under a new document-marking framework.

--	--	---

9) Public Access/Open Science (for articles and digital data): Acquire and disseminate DoD-funded, openly published journal articles, increasing access and encouraging innovation. Develop a catalog of digital datasets supporting the conclusions of journal articles.

10) FY 2019 NDAA Section 202 and Section 905 new mission activities: Dataset management, the Global Research Watch (GRW) program, and Innovators Information Repository (IIR).

SUPPORTING USER COMMUNITIES

DTIC supports user communities on the network where they work, i.e., NIPRNet, SIPRNet, and the public internet, and uniquely provides access controls within unclassified and classified material to protect intellectual property in our search, distribution, and collaboration tools.

- DoD's RDT&E Enterprise: As a Field Activity to the Office of the Under Secretary of Defense for Research and Engineering (OUSDR&E)), DTIC's priority is the RDT&E enterprise, hosting information assets and tools on the NIPRNet, the primary network for the community.

- Warfighter: Improving coordination between the acquisition enterprise and warfighter communities, DTIC hosts a subset of information assets and tools on the SIPRNet. DTIC is actively working to expand the availability of science and technology (S&T) information, to include Independent Research and Development (IR&D), on the SIPRNet. DTIC continues its efforts to establish parity of information and capabilities on applications hosted on both NIPRNet and SIPRNet platforms.

- Industry, Academia, and Citizen Science via Public Internet: Engaging industry outside the NIPRNet firewall to support acquisition improvement initiatives and encourage the introduction of innovation, DTIC hosts unclassified public information and tools accessible to all users on the Internet. DTIC provides public access to DoD-funded journal articles and research data, and increases outreach to industry through DTIC's Defense Innovation Marketplace.

SUMMARY

DTIC provides interactive tools and advanced tailored search engines to leadership, scientists and engineers, PMs and PEOs, warfighters and budget analysts. Furthermore, DTIC protects and preserves DoD's multi-billion dollar investment in research, which empowers the acquisition enterprise through innovative tools, information systems, and decision support capabilities. The efficiency benefits can be enormous. Each 1 percent increase in the reuse of S&T efforts produces over \$100 Million in savings that can be redirected. Those savings come from elimination of inefficient redundancy (and unnecessary delays), increased community interaction, and ultimately, a more capable military. DTIC is uniquely positioned to support and to ensure the value of DoD's R&D portfolio is fully realized.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2019	FY 2020	FY 2021
Title: Defense Technical Information Center	51.837	52.700	54.353
FY 2020 Plans:			
- Implement improved search features for geolocation, visualization and graphing, and search of multimedia to give users and researchers the capability for broader discovery and ability to follow the research from funding to completion.			

UNCLASSIFIED

A. Mission Description and Budget Item Justification

DoD Information Analysis Centers (IACs), established under DoD Instruction 3200.14, serve as a vital resource in providing timely, relevant information directly to users when and where it is needed. IACs serve as a bridge between the warfighter and the Acquisition/Research community, providing essential technical analysis and data support to a diverse customer base, to include the Combatant Commands (CCMDs), the Office of the Secretary of Defense, Defense Agencies, and the Military Services. IACs actively partner and collaborate with Defense Research and Engineering (R&E) focus groups and communities of interest in areas of specialized fields or specific technologies. The IACs create and maintain comprehensive knowledge analysis centers that include historical, technical, scientific, and other data and information collected worldwide. They are staffed with scientists, engineers and information specialists to provide research and analysis to customers with diverse, complex and challenging requirements. IAC operations, in concert with 2018 National Defense Strategy objectives, directly support the warfighter, and play an ongoing and critical role in solving key CCMD operational issues such as cyber security, unmanned aerial vehicle visual/audible signature reduction, and improvements to the ballistic resistance of body armor.

The IAC Program Management Office at DTIC performs contract acquisition, program management, and operational support for IAC contract operations and the technical information that is generated as a result of research and studies. In a time of shrinking budgets and increasing responsibility, IACs are a valuable resource for accessing scientific and technical information culled from efforts to solve new and historic challenges. Direct IAC customer support activities, such as Task Order processing, Basic Center of Operations (BCO) support, Defense Finance and Accounting Service (DFAS) activities, contracting/acquisition related activities, etc., are funded in part through partnerships with the Defense R&E community and the annual collection of customer reimbursements for their share of direct costs, in accordance with the IAC Reimbursable Review Board (IRRB) recommendations. This represents the maximum cost-sharing with IAC customers allowable, per guidance from the OSD Office of General Counsel. Annual IAC efforts and accomplishments are dependent on the level of participation and collaboration by the R&E community at large.

A. Mission Description and Budget Item Justification

This program element (PE) provides funding for the Management Headquarters (HQ) element of the Defense Technical Information Center (DTIC), a DoD Field Activity assigned to the Under Secretary of Defense for Research and Engineering (USD(R&E)). The PE supports personnel compensation for HQ-assigned civilians, along with related administrative support costs. DTIC's second RDT&E PE, established in FY 2017, is designed to track activities deemed as headquarters functions, with no operational efficiencies or enhancement to mission.

The PE supports the following HQ functions and mission essential activities critical to the success of DTIC's business operations, and mandated by law or regulation:

- Activity leadership, strategic planning, and Front Office support staff.
- The front office staff represents a small component of this PE. Most of the specialized functions and skill-sets described below are centralized activities within the PE, yet support the larger organization and its employees. These activities were consolidated as a means to improve efficiencies throughout DTIC, and are essential to the operation of DTIC's primary PE 0605801KA.
- Reductions to DTIC's MHA staffing levels continue, reducing civilian full time equivalents (FTEs) below FY 2020 levels.
- Financial Management and Comptroller. Provides integrated resource management at the Agency level to obtain, control, and execute budget and manpower authorities to support the organization's mission requirements. Develops and prepares agency budget documents and exhibits for submission to both OSD and Congress.
- Accounting support to DTIC's mission operations; partners with the Defense Finance and Accounting Service to present accurate financial reporting and Fund Balance with Treasury.
- Financial Improvement and Audit Remediation (FIAR) activities and oversight in compliance with the Department's audit goals, objectives, and milestones.
- Human Resources (HR) Liaison Support. Provides the DTIC enterprise with payroll processing and "Hire to Retire" mission support; oversees and organizes employee training, professional development, and staff certification programs (e.g., Acquisition, Financial Management, and IT programs).
- Coordinates recruitment placement and classification action for the mission areas; liaison to the Defense Finance and Accounting Service for HR servicing and the Defense Logistics Agency (DLA) for Equal Employment Opportunity (EEO) program maintenance.
- Mandatory Records Management compliance activities and administration programs.
- Chief Information Officer (CIO). Collects, analyzes, and reports information necessary to effectively and efficiently manage enterprise IT resources; CIO functions are performed in compliance with DoD-CIO guidance, instructions and mandates.

Change Summary Explanation

Program Change: In comparing the Current President's Budget FY 2021 Base program against the Previous President's Budget FY 2021 PB Base, there is a nominal increase of \$0.058 Million. This reflects a payroll expense adjustment associated with civilian manpower.

C. Accomplishments/Planned Programs (\$ in Millions)	FY 2019	FY 2020	FY 2021
Title: Management HQ - Defense Technical Information Center	4.124	3.027	2.837
FY 2020 Plans: - Execute the program, activities and functions as described above in Section A, Mission Description of PE 0605998KA.			
FY 2021 Plans: - Execute the program, activities and functions as described above in Section A, Mission Description of PE 0605998KA.			
FY 2020 to FY 2021 Increase/Decrease Statement: The change between FY 2020 and the FY 2021 Base (a net decrease of \$0.190 Million in FY 2021) reflects a net reduction in the number of civilian authorizations assigned to the Management Headquarters element of DTIC.
